

Dear customer,

Here at Oak International Freight Limited we are committed to becoming a more sustainable company within the road haulage industry sector. By the very nature of our business, we are reliant on diesel powered vehicles to move goods on our client's behalf across the United Kingdom, EU and globally. Until such time that technology provides a viable alternative we will be forced to continue with vehicles powered in this way. The majority of vehicles in service today comply with the latest "Euro 6" emission legislation, which became law in 2014 for any new vehicle entering service. "Euro 6" diesel engines are the cleanest of their type ever produced.

We are very aware that, even with the latest specification engines, there is still an impact on the environment and we want to take some action. Therefore, in a move to become a more sustainable organisation we have entered into a partnership with Carbon Footprint Limited where we will commit to a tree planting programme to assist in offsetting our carbon footprint. We understand that we cannot fully offset this footprint, but this incentive will go a long way to reducing the burden as well as supporting a project in the Amazon rainforest.

From January 1<sup>st</sup> 2022 our aim is to plant one tree per customer for every five jobs received. For example, for 35 jobs received in a 12-month period, Oak International Freight Limited will plant 7 trees on your behalf. Trees will be planted on a monthly basis with a certificate produced confirming the number on a monthly and annual basis, as per attached example.

Thanks to the support of our customers in 2021, going forward we could be on track to plant somewhere in the region of 600 - 700 trees annually, potentially offsetting up to 2.6 tonnes of CO2 per acre.

Whilst this is not a finite solution to the problem, we believe this is a step in the right direction and look forward to working with you on this.

This certificate acknowledges that

**Oak International Freight Limited**

offset 5 tCO<sub>2</sub>e

through verified carbon reduction projects  
and planting 5 trees in South West, UK

17 November 2021

Helping to combat climate change  
and sustain our environment for future generations
